### **REASONS FOR ALLOWANCE**

Quivy et al (US 5,096,694) teaches the use of radiolabelled thymidine for radiotherapy or imaging of cancer. The JP 10-059990 patent teaches the use of radioactive metal complexed to the phosphate group on the sugar moiety. The radiolabel is not covalently bonded to the base of the nucleotide. Both references are silent regarding the use of DHT as a component in the treatment and imaging of cancer. The radiolabelled conjugate of instant formula (I), comprising the radiolabel on the base and which has at least one 4-dihydrotestosterone (DHT) linked to the 3' or the 5' position via a linking moiety and the use of the said conjugate for the treatment and imaging of malignant tumor, as instantly claimed is neither taught or suggested by the prior art of record.

Any comments considered necessary by the applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".

Any inquiry concerning this communication should be directed to Shaojia A. Jiang, Supervisory Patent Examiner of Art Unit 1623 at 571-272-0627.
